

Legend

- Input / output data
- Convolutional layers
- Pooling + regularization
- Dense (fully connected) layers
- Normalization / denormalization
- Alpha-blending integration
- Station density confidence

Training Configuration

Loss: Mean Squared Error (MSE)
 Optimizer: Adam
 Split: 80/20 train-validation
 Early stopping: patience = 5 epochs

Key Behavior

Only extreme pixels (>80th pctl) are blended
 Non-extreme pixels retain pure P_LSEQM
 Zero-rain pixels are never modified
